DETAILED ACTION

The rejection under section 112, first paragraph is withdrawn in view of the new claims, which limit the substrates to those prochiral aryl and heteroaryl ketones, which do not require undue experimentation to proactice the invention.

The rejection under section 112, second pagraph is withdrawn in view of the new claims which do not contain the clarity issue set forth in the last office action.

The prior art rejections are withdrawn since Arikawa and Nishibayashi fail to teach hydrogenation with a hydrogen gas.

The following new ground of rejection is now entered:

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 19-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent No. 5,614,641 to Genet et al. (Genet).

Genet teaches hydrogenation of aryl ketones (see examples). The catalysts

used are ruthenium catalysts of the formula:

see column 2. The catalysts

are also of the formula $L^*R_n(Z)_2$ see column 7. See column 7, lines 1-40 for definitions.

The difference between the process set forth in the rejected claims and the process disclosed in Genet is that Genet fails to explicitly teach the specific substrates covered (see claim 32). However, given the hydrogenation of aryl ketone substrates taught by the reference, hydrogenation of the claimed substrates would be within the purview of those of ordinary skill.
